

BMP 038 - Completely Drain Oil Filters before Disposal

Description of Potential Pollutant and Source: Oil filters that are disposed in trash containers can leak significant materials which can be exposed to storm water.

Description of BMP: Filters will be completely drained into collection drums before recycling or disposal.

Application Guidance: All filters will be completely drained after being changed.

Training: Signs will be posted to remind personnel of requirement to completely drain oil filters before disposal.

Effectiveness and Cost: Completely draining filters is a moderately effective, low-cost BMP.

Limitations: None
